

# Pipeline

Thursday, 9 February 2017

12:39

Data Loader	Loading Preprocessing Automatic Bounding Boxes Mislabel filtering Fish: Head and Tail detection (or find different features) Numpy arrays as data storage
-------------	--

Hyper parameter optimizer	Cross-validation, xgboost Stacking or different ensemble
---------------------------	---

→ Classifier	Have base class and all other classifiers inherit from that Use sci-kit Have a fit and a predict method, have constructor (init with parameters, probably dict with name of parameter and value)
→ Evaluation
